RE: 120308 - Software Developer

Dear Ashley Reeve:

I worked for Papa Johns as a driver and as a in store supervisor, so seeing your job posting piqued my interest. I would love to be a part of a team that makes it easier for pizza parlors. I remember it being particularly annoying to manage staff hours and the clocking in and out system. Being able to provide a better service than I experienced would be something I would be proud to be a part of.

I have experience in software testing in Java, specifically JUnit that I would bring to help with this role. I gained this experience during a software engineering course where we developed a game. The test coverage had to be one hundred percent line coverage. I have also written test in C but in a less structured manor and using no testing frameworks were used. The project was a linked list that could not have any system calls. I wrote tests to confirm that all the implementation of the link list functions worked as intended. This was all on Linux.

Before going to university, when I was a shift supervisor at Papa Johns, I learned great customer service and attention to detail. I opened the store alone and I was alone for the lunch rush where I had to accurately take customer orders and make their pizzas. The shift ended after the dinner rush where I led a team of up to five people to run the store. I trained and orientated new hires giving me strong oral communication.

I am excited by the thought of working with SpeedLine Solutions in the software developer role. You can contact me through the SFU co-op office or directly if you would like to set up an interview. Thank you for your time and consideration.

Sincerely,

Sam Nygard
